SCRIPT FOR MARK

Adyen × F1: the conversation with Mark (Chairman deck 11)

What this is. A full script for walking Mark through the deck in person, so he can take the case to Peter. It's written to be said, as a conversation. Say it your way. Lines in *italics* are cues. **Remember** is the one line to hold on to. **Ask Mark** marks the points where you stop and let him talk. **Where it's from** tells you which source to name if he asks.

The thread. We're not selling marketing rights. We're showing how F1, as a platform, can work for Adyen's business. Success isn't a logo on a car; it's an integrated partnership that starts with Adyen running payments inside a team's or Max's business.

Timing. About 45 minutes, and Mark should do a third of the talking. If time runs short, protect slides 1–5, 11, 15, 18 and 36. Hidden slides (8, 12, 14, 16, 25) aren't scripted.

1 Opening

KEY SLIDE

Hi Mark. Thanks for making the time, and for being our champion on this inside Adyen.

Let me be clear about what today is and isn't. It isn't a walk through marketing rights. And it isn't a pitch for what Adyen could sell to a racing team. It's about how Formula 1, as a platform, can work for Adyen's business, and support you when you take this to Peter.

Here's the shift we'd like you to carry into that room. Most sponsorships are measured by a logo on a car. That's a marketing metric, and on its own it would undersell what F1 can do for Adyen. The question we'd measure this by is different: how integrated can the partnership be? It starts with payment integration: Adyen running the payments inside a team's business, and potentially inside Max Verstappen's. From there it becomes a case study your sales teams can use, a place to host your clients, and a network of companies that should be Adyen merchants.

And what we want to give you for Peter isn't a passion play about racing. It's an objective business case he can test: what Adyen puts in, what it gets back, and how you'd measure it.

Two ground rules. We're not the rights holders, so we won't have every answer today; anything we can't answer, we'll get to you before you see Peter. And please interrupt us. This works best as a conversation.

Ask Mark: Before we start: how does Peter judge a partnership like this today? If his first question is "what's the exposure?", we should know that now.

2 What Adyen wants from F1

KEY SLIDE

This is your brief, as you gave it to us. It set out four priorities. A global brand: show how Adyen's payments can power the financial business of F1. Client relationships: host partners, merchants and senior decision-makers. Commercial growth: win new deals, renew contracts, build pipeline. And one global programme: unite local hosting across an initial eight to ten races.

We've put a fifth one first, because everything else rests on it: payment integration. Adyen's payments live inside a team's or rights holder's business, as a working product.

Our hypothesis, in one sentence: an F1 partnership can build Adyen's global brand and deepen client relationships, through payments storytelling and a global hospitality programme. That's the headline. It's B2B growth, not payment volume.

Cue: be candid here. If this were purely about transaction volume, F1 wouldn't be the cheapest answer; football would. That's why we'd ask Peter to judge it on all five priorities together.

Ask Mark: Of these five, which one would Peter rank first? And which one do you think he'd be most sceptical about?

3 Competitive landscape

KEY SLIDE

Remember: 32 deals, only 2 in F1, none of them Adyen's. F1 is open, and it's always on.

Here's where the payments industry already sits in sport. It's SPORTFIVE's own scan; not exhaustive, but it shows the shape. Each dot is one deal: a club, a league, a venue, an event.

Seven of your competitors hold 32 between them. Football has 11, the US leagues 12. F1 has just two: Stripe with Mercedes, and Airwallex with McLaren.

The bottom row is Adyen today: payments partner to FC Bayern and Legia Warsaw. Football only. Nothing in F1.

Two things to take from it. First, F1 is the least crowded arena in sport for payments. Second, it's always on. Football and the US leagues come in matchday bursts. F1 runs ten months a year, March to December, on five continents. That's a story Adyen can tell every week, not every other weekend.

> **Where it's from:** SPORTFIVE's competitor scan; Adyen's row from public announcements.

Ask Mark: FC Bayern runs on Adyen. What has that partnership delivered for you, and what hasn't it? That tells us what F1 needs to do differently.

4 Why F1, at a glance

KEY SLIDE

Six facts, and each one comes back later in the deck.

F1 is the number one sport, of the five we compared, for all five audiences Adyen sells to; that's GWI data. It has 625 million followers, up 31% in four years, also GWI. Half of the world's most valuable brands are involved, according to GlobalData. 457 million F1 fans live in Adyen's own office markets. There are 24 race weekends a year to host at. And the eleven teams have 371 partners between them, with $6.7 trillion in combined revenue; that's our own analysis of the teams' partner lists.

Two insights worth keeping for Peter. First, timing: the audience growth shows a sport on a trajectory that's still climbing, and the payments seat is still open. That's the case for getting in the door now rather than later.

Second, the number that matters most for a B2B business isn't the audience, it's the network. GlobalData counted 125 new F1 sponsorship deals in 2025, up 29% on the year before. More companies join every year, and each one is a potential Adyen client in the same paddock.

> **Where it's from:** GWI for audiences and followers, GlobalData for brands and deals, SPORTFIVE for the partner network.

If he asks what kind of data this is: "Independent, third-party research, not our own numbers: GWI for audiences, GlobalData for deals, and later Kantar for brand value. None of it was commissioned for this pitch." The fuller answers are in the data section at the end.

5 Executive summary: three routes

KEY SLIDE

So how does Adyen get in? There are three routes, and two already have proposals on the table.

Max Verstappen: reach, influence, and a business Adyen can actually power. Alpine: the full team platform, with Adyen as the exclusive financial technology partner, running the team's new online store. Ferrari: the option we're opening, with the biggest pool of fans working in financial services of any team. No proposal yet.

What we'd want you to take to Peter isn't "pick a contract". It's agreement that F1 is the right platform. Then you start with one route, prove it, and grow.

Ask Mark: If you had to walk into Peter's office with one route today, which would it be, and why? *Don't debate it; note the answer and come back to it at slide 20.*

6 The audience

KEY SLIDE

Remember: F1 reaches the people who buy Adyen, and the consumers its merchants want.

This is GWI data. We compared five sports on five audiences that matter to Adyen, and F1 comes first on all five.

It's worth being precise about who they are. Three are buyers: business owners and founders, senior decision-makers, and people at large companies, which is where your enterprise accounts sit. Two are consumers: high earners and early tech adopters. They don't buy from Adyen; they're the people paying at your merchants' checkouts.

Two numbers stand out. Early tech adopters: an index of 238, 31% ahead of the next-best sport. Senior decision-makers: 167, 12% ahead. And on the right, fans who work in financial services: every team's fans over-index, and Ferrari has the biggest pool, 1.8 million.

Why it matters: Adyen sells to two people at once, the one who signs the contract and the one who tries a new way to pay first. F1 over-indexes on both, in the same audience. There's a payments-specific signal too: Alpine's own GWI data shows its fans are 1.8 times more likely than the average internet user to use Google Pay, and 1.6 times more likely to use Apple Pay.

One honest gap. The people who actually choose a payments platform are finance leaders, technology leaders and heads of ecommerce. GWI doesn't break those job titles out by sport, so we won't claim them; senior decision-makers is the closest proxy we have.

> **Where it's from:** GWI. 100 is the general population, so 238 means early tech adopters are more than twice as common among F1 fans. Google Pay and Apple Pay: GWI Core, from Alpine's proposal.

Ask Mark: Who signs off on a payments platform at your biggest accounts: finance, technology or ecommerce? If it helps, we can ask our data team for that cut.

---

7 Footprint

KEY SLIDE

Remember: One programme instead of many, and a partnership unlocks experiences money alone can't buy.

Quickly on the map. Your 28 offices sit next to the 24 races; every region with an Adyen office has a Grand Prix except India. 457 million F1 fans live in your office markets, and the audience is growing fastest in India, the US and Japan.

Here's what that means. Adyen already buys race hospitality, but market by market. Bring it into one programme through a partnership and you get economies of scale. One budget, negotiated once for the whole of Adyen, instead of each country buying its own. One standard for how Adyen hosts. One view of who you hosted and what it led to. And each market still hosts its own clients at its own race.

There's also something a ticket can't buy. An independent hospitality package gets your guests a good seat and good food. A partnership with a team or a driver gets them inside: a garage tour, a driver meet-and-greet, a pit-lane walk, an engineer's briefing, a visit to the

factory. Those are the moments clients remember and talk about afterwards, and they only come with a team or rights-holder partnership.

> **Where it's from:** GWI for fans by market; the 2027 F1 calendar; Adyen's office list. The experiences are from Alpine's and Max's proposals.

Ask Mark: Which markets buy F1 hospitality today, and roughly what do they spend? That's the budget a single programme would pool.

---

9 Business leader network

KEY SLIDE

This is the slide that matters most for an enterprise business. It's GlobalData's 2026 analysis.

Half of the world's most valuable brands are involved in F1. The public companies in the F1 ecosystem alone have $10 trillion in combined revenue. If that were an economy, it would be bigger than Germany, Japan, India, the UK or France. And that's public companies only; add the private ones and it's larger still.

Five of the Magnificent Seven are in this room. For Adyen this isn't an audience to advertise to. It's a client list that meets in the same place twenty-four times a year.

Ask Mark: Which of these logos are already Adyen merchants, and which ones are your teams chasing?

---

10 Brand value

KEY SLIDE

Remember: Three separate facts: the F1 brands, strong brands beat the market, brands built for the future grow 2.3 times faster. Then IBM and Amex in one line.

Peter will rightly ask what "brand" is worth in money. This slide answers it in three numbered steps, and it's worth being precise, because they're three different things.

One: the list. Kantar publishes a ranking of the world's 100 most valuable brands every year. This is the 2026 list. The brands boxed in green are involved in F1. So F1 is full of the world's most valuable brands.

Two: strong brands beat the stock market. Kantar picks out the brands in its Top 100 with the strongest brand equity, and tracks them as a share portfolio. Over twenty years, that portfolio returned 504%. The S&P 500 returned 451%, and the MSCI World 234%. To be clear, that's Kantar's strongest brands, not all 100 and not only the F1 ones.

Three: brands built for the future grow fastest. Kantar and Google looked at European companies from 2019 to 2025. Brands with what Kantar calls strong "Future Power", meaning they're well set up to grow, rose 165% in share value. The stock market rose 72%. Weaker brands, 44%. That's 2.3 times the market.

And at the bottom, two examples in one line. IBM and American Express both posted their biggest brand-value gains in the year they entered F1. IBM is one of Ferrari's partners. And Kantar says American Express doubled its brand value since 2024, well ahead of the other payment brands.

So the point for Peter: a strong brand isn't a marketing cost. It's a financial asset. And F1 is where many of the world's strongest brands choose to build theirs.

> **Where it's from:** Kantar BrandZ 2026, the brand-value ranking Kantar publishes every year, combining company financials (from S&P Capital IQ and Euromonitor) with its own consumer research. The F1 boxes are SPORTFIVE's marking. Point three is Kantar with Google; on the original chart it's an index, 2019 = 100, rising to 265, 172 and 144.

Ask Mark: Does Peter see brand as a cost or as an asset? It changes how we frame the investment.

---

11 F1 pays for itself

KEY SLIDE

This is the part of F1 that pays for itself: hospitality. It does three jobs. It keeps clients, with experiences ordinary hosting can't match. It builds pipeline, because every race puts senior decision-makers in one place, with time to talk. And it brings in new merchants: the teams' 371 partners are all in the paddock.

Cue: say the next part without showing it. The source material is confidential, so it isn't on any slide.

You don't have to take our word for the returns. Three partners have measured them.

Komatsu hosts its key global stakeholders at races with Williams; for many of them, it's the first Komatsu event they've ever attended. Komatsu has hosted 3,735 stakeholders. 90% said it was useful for business discussions, 94% were satisfied, and Komatsu has received more than $100 million in orders at races.

HPE has partnered Mercedes since 2018. Their CEO, Antonio Neri, says the real value is being able to show their technology working through Mercedes, and to engage customers directly at races. Looking back over that partnership, in his words: "From race activations alone, we've accelerated over $300 million in revenue opportunity."

And Businessolver, a partner of Alpine: $122 million in business pipeline, influenced by hosting at the track.

The economics are simple. Adyen already spends on hosting, market by market. Pull that into one programme across eight to ten races and the partnership starts funding itself: one budget, one standard, and much more leverage.

Ask Mark: What's a new enterprise merchant worth to Adyen in its first year? Once we know that, we can work out how many the programme has to win to pay for itself.

Ask Mark: And roughly what does Adyen spend on hosting today, and who owns that budget in each market?

> **Where it's from:** partner case material compiled by SPORTFIVE: Komatsu with Williams, HPE with Mercedes, Businessolver with Alpine. Marked confidential, so keep it in the room.

If Mark asks how long it took them to earn it back: be precise, because none of the three figures is a payback period. HPE's $300 million is revenue opportunity accelerated over its whole partnership with Mercedes, which started in 2018, so roughly eight seasons; it's opportunity, not booked revenue. Komatsu's $100 million is orders received at races; the material gives no time period, but Komatsu's current Williams partnership began in 2024 and was renewed this year, so it sits within the last few seasons. Businessolver's $122 million is pipeline influenced, not closed business, and also has no period. Say: "The case material doesn't give a payback period; we'll get the exact timeframes for you before you see Peter." Then turn it back to Adyen's own maths: what's one new enterprise merchant worth in year one?

---

13 Team partnership network

When you partner a team, its partners become people you can do business with. This is our own analysis: every partner listed on each team's website in November 2026, with 2025 revenues from company reports.

At Alpine, that's 49 partners with $390 billion in revenue, led by Boeing, Eni and Renault, and Gucci joins as title partner in 2027. At Ferrari, 42 partners with $568 billion: Shell, IBM and HP at the top.

Every one of those companies takes payments somewhere. The team makes the introductions, and Alpine's offer goes a step further, with something it calls the One Platform Partner Forum.

It's a recurring business forum. Alpine brings together relevant companies from its partner network with Adyen's experts, Adyen's customers and invited enterprise leaders. The sessions are built around shared problems: payments, unified commerce, customer experience and international expansion. So it isn't a sales pitch dressed up as an event. It's a room of peers talking about problems Adyen solves, with Adyen's own experts in it.

To be precise about what it is: Alpine facilitates the introductions; it doesn't guarantee any partner will buy, or oblige anyone to talk commercially. The value is warm, credible access to companies like Boeing, Eni and Renault, through a team they already trust.

And McLaren, with 57 partners, more than any team on the grid, shows you how hard teams are selling. Under the budget cap, commercial growth is where they build value, and that works in a partner's favour.

> **Where it's from:** Alpine F1 Team, Provisional Rights Overview 2027–2029 (the One Platform Partner Forum, in its marketing framework).

Ask Mark: Look at Alpine's and Ferrari's lists. Which three would you call first, and which Adyen experts would you put in that forum?

---

15 Adyen wouldn't be following

KEY SLIDE

Remember: They're behind the scenes. Adyen would be in front of the fans.

So, are we asking Adyen to follow its competitors into F1? No. Look at where they sit.

Behind the scenes: Stripe partners Mercedes. Airwallex runs McLaren's supplier payments. Useful, but fans never see it.

In front of the fans: Adyen's seat is the commerce fans actually use, live at the races. Alpine's team store. Verstappen Travel's tickets. Tap to Pay at Max's trackside trailers.

That's not following anyone. It's Adyen's product working in real time, in front of fans and clients, which is exactly why the best brands are in F1.

Ask Mark: How would Peter react to the headline "Adyen joins Stripe and Airwallex in F1"? We want the story he hears to be "Adyen takes the seat they didn't".

If Mark says Peter won't want Adyen seen next to Stripe and Airwallex: "Fair, and that's exactly why we wouldn't put Adyen next to them. They're already in F1; staying out doesn't remove them, it just means your customers only see them. Inside a team each partner owns its category, and Alpine is offering Adyen exclusivity, so no rival can be there. And it's a different job: they're a logo or a back office, Adyen would be what fans actually pay through." The full answer is in the questions at the end.

---

17 We've done this before

Remember: Diagnose, design, deliver: we took Airwallex from first idea to board decision.

We know this playbook because we built it, for Airwallex and McLaren. Three stages.

Diagnose: we found the gap. Enterprises didn't know Airwallex well enough, so we mapped where F1's B2B platform could change that.

Design: we positioned Airwallex against other fintechs, built the evaluation model and modelled the investment.

Deliver: we built an enterprise-focused rights package, structured the deal for access to McLaren's network, and supported the board decision.

That's the process we'd run with you. *If Bjorn is there, hand to him: "Bjorn was close to this one."*

18 Proof of concept: Airwallex × McLaren

KEY SLIDE

This is what that partnership actually did inside McLaren's business. It's Airwallex's published case study.

The challenge: McLaren races in 24 locations, so it pays suppliers all over the world. Payments were manual, around 30 per run, with high FX and transfer fees, and two to five business days to settle through banks and SWIFT. And under F1's cost cap, every pound saved in operations is a pound that can go on the car.

Airwallex went live in 14 days. It automated the payment runs, paid suppliers in local currencies, and connected to McLaren's banking and accounting.

The results: 90% of payments now arrive within hours, 65% instantly. Local payment networks in more than 110 countries. Half a day a month saved on payment runs, and more than £4,000 a year in fees.

Here's the insight. The savings are small. The story isn't. Look at what Airwallex actually got from it, in three steps. One: its payments integrated inside a championship-winning team, which became the case study. Two: it told that story to its own customers and prospects through F1 hospitality, on track at the races and off track. Three: it built new business through McLaren's partner network. That's the model: solve a real problem inside the team, then sell the story, then use the network.

Ask Mark: What would a case study need to show for Adyen's sales teams to actually use it in a pitch?

19 Where Adyen sits in the business

KEY SLIDE

Now let's put Adyen in that position, using your own material. This is the value chain from Adyen's "Racing | Unified Payments" deck: from pit lane to checkout, payments built for speed.

Today, a team's fan commerce runs on a patchwork: a gateway here, a processor there, a different acquirer for the stands. Adyen's pitch is the one in your deck: one partner, one platform, one integration. Online and in person, from the fan's phone to the team's bank account: gateway, risk, authentication, processing, acquiring and reconciliation, all in-house.

Think about what an F1 team actually is. Your FC Bayern case study says it best: Bayern is "not merely a soccer club". It's a ticketing provider, a lifestyle brand, an omnichannel retailer and a streaming platform. An F1 team is all of that, in 24 countries a year. That's exactly the business Adyen is built to power.

So we'd judge every route in four steps. Power: Adyen runs the partner's payments. Prove: live data becomes a case study, the way Anderlecht's 36.6% rise in food and drink revenue already works for you. Host: hospitality at the centre. Connect: the partner's network becomes pipeline.

Ask Mark: Which Adyen products would you want to show off first in F1: online checkout, in-person and Tap to Pay, or unified commerce across both?

20 Three routes into F1

KEY SLIDE

Now the detail on each route.

Max and Alpine came out of conversations we've already had, and both proposals are on the table for discussion. Max runs 2027 to 2030, at €5 to 8 million a year depending on the rights. Alpine runs 2027 to 2029, at £10 million in 2027, rising 5% a year. Ferrari has no proposal yet.

The plan at the bottom matters more than the choice. Start with one route. Prove that Adyen's payments work inside the partner's business. Then grow: more teams, more races, more markets. And if none of these is right once Peter buys F1, there are other routes, Red Bull among them. The first decision is F1 itself; the route comes second.

21 Max Verstappen

KEY SLIDE

Route one: Max. More than a champion, a motorsport entrepreneur.

The numbers are Max's, from his team's proposal: four world titles, 71 Grand Prix wins, 19 million followers on Instagram, and, according to Nielsen Sports, the most popular driver on the grid.

But the reason he's here is that Max has built a business: a shop, travel, GT3 racing, rally, sim racing, a pro simulation centre and an app. He's gone from competitor to entrepreneur, and that's the kind of high-growth business Adyen exists to power. Two Dutch innovators.

22 Powering Verstappen.com

KEY SLIDE

So where would Adyen power Max's business? Let's be straight about it.

The online store is out of reach: Fanatics runs it under an exclusive deal. The best fit is Verstappen Travel: Orange Army grandstand tickets online, and the trailers selling merchandise at the track. In Adyen's language, that's online payments and checkout for the tickets, and in-person payments and Tap to Pay at the trailers: one platform, online and at the circuit.

It's not a volume play. We've asked Max's team for grandstand ticketing volumes and we'll share them as soon as we have them. The value is the story: the most popular driver on the grid, running his business on Adyen.

Ask Mark: Which matters more to Peter here: Max's name next to Adyen's, or Adyen running inside Max's business?

23 Rights package: Max Verstappen × Adyen

This is a first draft of what's possible, and the next step is to tailor it to Adyen.

It runs 2027 to 2030. Max becomes an ambassador, with a full day of his time, three paddock meet-and-greets for VIP guests, a garage tour and a private track day. There's branding across his helmets, race wear and GT3 car, and the business integration we just discussed.

The fee range is €5 to 8 million a year, depending on which rights Adyen takes.

Only if he presses, and flag it as rough: as drafted, the package is around €8 million, about €9 million with hospitality. Without the GT3 branding it's around €5 million, €5.5–6 million with hospitality.

24 A tailored hospitality package

KEY SLIDE

Max's package is light on F1 hospitality, so this is where we'd build it in.

And this doesn't have to be new money. The idea is to bring together the hospitality budget Adyen already spends, race by race, into one tailored programme: Max's rights, plus race-weekend hospitality, off-track experiences, and travel and guests handled end to end.

The next few slides are examples, not a quote. With your feedback, we build it bespoke.

Ask Mark: Which three races would you pick for Adyen's first year, and why those?

26 Example race: Miami

To make it concrete, here's one race: Miami.

There are four ways to host. A private villa for 20 guests over three days, from $250,000. Two clubs, from $7,500 and $12,000 a person. And the one we'd point to for this route: the Red Bull Energy Station on race day, from $5,250 a person, with Q&As with Max Verstappen and Isack Hadjar.

If asked: these are starting prices from our hospitality team, and what's included varies race by race.

27 Example programme: Austin

And this is how a full programme comes together around one race: four days in Austin.

Day one, arrival at the Commodore Perry Estate and dinner at Hestia. Day two, hat shaping, boot fitting, and horseback riding with former world champion Jenson Button. Day three is race day, from a private suite at Circuit of the Americas. Day four, home.

That's the difference between giving someone a race ticket and building a relationship.

28 Off track

A race weekend is three days, and the time off track matters as much as the race. Friday to arrive and unwind, Saturday to explore the city, Sunday for the race and the after-party. These ideas come from our programmes in Austin, Singapore, Silverstone and Madrid.

29 End-to-end hospitality

And we'd run all of it, so your country teams don't have to: travel as a licensed travel agent, hotels from our own inventory, a branded platform for guests and invitations, and partners on the ground. More than twenty years of doing this, for over 30,000 guests a year.

Cue: hospitality is Tom's area. Offer Mark the full hospitality deck, and ask him to complete the hospitality brief.

30 Alpine

KEY SLIDE

Route two: Alpine. This comes from Alpine's own presentation to us.

It's a team with real pedigree. Enstone, Alpine's home, has produced seven world championships: Schumacher with Benetton, Alonso with Renault.

And it's entering its biggest commercial era. From 2027 the team races as Gucci Racing Alpine. That tells you who is choosing to stand next to them. It's backed at the top, too: Renault Group's CEO says F1 is core to Alpine's strategy and that won't change. Pierre Gasly is signed to 2028 with nine million followers; Franco Colapinto brings seven million, and Argentina with him.

The offer to Adyen: exclusive financial technology platform partner, 2027 to 2029, £10 million in 2027, with 56 Paddock Club tickets a year.

31 Alpine's fans

Who would Adyen be talking to? Alpine's own numbers, from GWI, Nielsen and Blinkfire.

63.6 million fans. 26.8 million are decision-makers at work, and one in ten is C-suite. They're 276% more likely to be an executive purchaser than the average sports fan.

And on the right, Alpine's two strongest fan groups are executive purchasers, at almost four times the average person, and early adopters of new technology, at three times. Enterprise buyers and early adopters: that's Adyen's customer list.

32 Alpine makes partnerships pay

And Alpine knows how to make a partnership pay back.

On hosting: 90% of guests at the Alpine Lodge say they're more likely to do business with their host, and 93% leave understanding the host's business better.

On campaigns: Eni got 9.8 million impressions from one home race at Imola. Xbox got 6 million from a single weekend. A series with Mercado Libre and Colapinto reached 23 million impressions. And Alpine's STEM programme with Microsoft reached students in 99 countries.

That's the machine Adyen would plug into.

Ask Mark: Exclusive at Alpine, or non-exclusive with Max: how much is exclusivity worth to Peter?

---

33 How Adyen would power Alpine

Alpine's plan for Adyen follows the same four steps. Power: Adyen runs the team's new online store, with fan rewards on top. That's your online payments, checkout and local payment methods, welcoming every fan with their preferred way to pay. Prove: films and features on the integration, and a live lab at the Enstone factory for your customers. Experience: a race-week showcase with an Adyen customer in a Grand Prix city, with online and in-person payments in one place. Convert: a C-level club at the races, and a forum with Alpine's partners.

---

34 Alpine rights overview

Highlights only. Branding on the engine cover and halo. Time with the drivers and senior team. Content and case studies. And a strong hospitality programme: 56 Paddock Club tickets a year, factory tours at Enstone, a driving day, and introductions to Alpine's partners. The full list is there for reference.

---

35 Scuderia Ferrari

Route three, briefly: Ferrari.

42 partners with $568 billion in revenue, Shell, IBM and HP at the top, and six partners worth more than $200 billion each. And, from GWI, Ferrari has the largest pool of fans working in financial services of any team: 1.8 million.

The question for Ferrari is the same one we asked of Alpine and Max: which parts of its business could Adyen power? We'll only know once Ferrari can share information, and that's waiting on the NDA.

Cue: if the Ferrari call is confirmed, it follows this walkthrough as a 30-minute virtual session. The aim is simply to give Mark enough to talk to Ferrari himself; we're not negotiating.

Ask Mark: Where are we on the NDA? If it's signed this week, Ferrari can share what we need before you see Peter.

36 Next steps

KEY SLIDE

Six steps from here. Your review with Peter. Your feedback, including on the hospitality programme. Refine the rights. Decide on Ferrari. Then the contract and integration plan, and launch.

Ask Mark: What would make Peter say no? Let's make sure we've answered it before he asks.

Ask Mark: What do you need from us before you see him: numbers, a shorter version of this deck, or a rehearsal?

Ask Mark: And once Peter says yes, who else at Adyen should be in the room?

37 Sources and notes

Keep this slide for reference. If Mark asks where a number comes from, it's here, and the speaker notes on each slide carry the full detail.

If Mark asks where the data comes from

If he asks "what kind of data is this?", the short answer:

"It's independent, third-party research, not our own numbers. The audience data comes from GWI and the brand-value data from Kantar. None of it was commissioned for this pitch: it's subscription research and published reports that brands, agencies and investors use every day to make decisions. Where a number is ours, like the partner network or the competitor scan, we say so on the slide. And the team and driver figures come from the rights holders' own materials."

If he asks "what's GWI?":

"GWI is a global consumer research company. It surveys internet users around the world, in regular waves, on what they do, buy, watch and follow. That's what lets us compare F1 fans with tennis or football fans on exactly the same questions. The numbers are indexed: 100 is the general population, so an index of 238 means that group is more than twice as common among F1 fans."

If he asks "what's Kantar?":

"Kantar is one of the world's largest marketing research and data companies. Every year its BrandZ report puts a dollar value on the world's most valuable brands. It combines each company's financial results, using data from S&P Capital IQ and Euromonitor, with research into how consumers see the brand. So when we say a brand is worth $150 billion, that's Kantar's valuation, not ours."

In more detail, source by source:

GWI. A global consumer research company that runs large online surveys of internet users. We use it for F1's audience size and growth, how F1 fans compare with other sports, and fans by market. An index of 100 equals the general population.

GlobalData. A data and analytics company that tracks sponsorship deals and company financials. We use it for the value and number of new F1 sponsorship deals (new deals only, not renewals) and for the brands involved in F1 and their revenue.

Kantar BrandZ. Kantar's annual ranking of the world's most valuable brands. It combines company financial data (from S&P Capital IQ and Euromonitor) with Kantar's own consumer research. The Future Power study was done with Google on European companies.

SPORTFIVE. Our own analysis: the competitor scan, and the partner network, built from every partner listed on each team's website in November 2026 with 2025 revenues from company reports and companiesmarketcap.com. The Komatsu, HPE and Businessolver results are partner case material we've compiled; they're confidential.

Airwallex. Its published McLaren Racing case study.

The rights holders. Max Verstappen's proposal (October 2026), with Nielsen Sports cited for his popularity; Alpine's provisional rights overview and its own team presentation, which cites GWI, Nielsen and Blinkfire Analytics.

Adyen. Your office list, your "Racing | Unified Payments" deck and its case studies (FC Bayern, RSC Anderlecht).

Questions Mark may ask, and how to answer

"What kind of data is this?"

Independent, third-party research: GWI for audiences, Kantar for brand value, GlobalData for sponsorship deals. None of it was commissioned for this pitch. Where a number is ours, the slide says so; team and driver figures are from the rights holders. (Full answers, including what GWI and Kantar are, in the section above.)

"What's the payment volume?"

Honest answer: modest, and it isn't the headline. Max's ticketing volumes are on request. The value is the case study, the hosting and the network.

"Why not just do more football?"

For volume alone, football is cheaper and more accessible. But it's crowded with your competitors, it's seasonal, and it doesn't put Adyen in a room with this calibre of buyer every race weekend for ten months.

"Peter won't want Adyen seen in the same space as Stripe and Airwallex."

Agree with the instinct, then show why it doesn't apply. "That's fair, and it's exactly why we wouldn't put Adyen next to them. Three points. One: they're already in F1. Staying out doesn't remove them; it just means your customers only see them there. Two: Adyen wouldn't share their space. Inside a team, each partner owns its category. Stripe is at Mercedes, Airwallex at McLaren, and Alpine is offering Adyen exclusivity as its Financial Technology Platform Partner, so no rival can be there. Three: it's a different job. Stripe is a partner logo; Airwallex runs McLaren's supplier payments where fans never see it. Adyen would run what fans actually touch: the team store, the tickets, Tap to Pay at the track. And you already live with this in football: Adyen powers FC Bayern while PayPal, Shift4 and Ant International hold deals elsewhere in the sport. Sharing a sport has never meant sharing a stage."

"So how does Adyen stand out?"

Five ways, all in the deck. Be visible: live commerce at the races, not a logo. Be exclusive: category exclusivity at Alpine, and ask for payments exclusivity in Max's package, which is non-exclusive as drafted. Be the case study: publish live results, the way Anderlecht's 36.6% rise in food and drink revenue already works for you. Own a story: from pit lane to checkout, one platform online and at the circuit. And host your own way: one global programme, to one Adyen standard. Remember the Kantar point: American Express outgrew the other payment brands by curating experiences, not transactions.

"How does this pay for itself?"

Through hospitality and pipeline: one programme replacing today's market-by-market hosting, and the deals that close in those rooms. Komatsu, HPE and Businessolver have measured it (say it, don't show it).

"How long did it take Komatsu and HPE to earn that back?"

The material doesn't give a payback period, so don't invent one. HPE's $300 million is revenue opportunity accelerated across its partnership since 2018. Komatsu's $100 million is orders received at races, with no period given; its current Williams deal started in 2024. We'll confirm the exact timeframes before Mark sees Peter.

"What does it cost?"

Max: €5–8 million a year depending on rights. Alpine: £10 million in 2027, rising 5% a year, with 56 Paddock Club tickets included.

"What if Peter likes F1 but not these routes?"

Then we look at others. The first decision is F1; the route comes second.

"Can you answer X?"

If it's a question for the rights holder, we'll get the answer to you before you see Peter.
