TALKING SCRIPT

Adyen × F1: talking script for Peter (Chairman deck 10)

How to use it. Each slide has the line to land, then the words to say. Say them your way; the numbers are all on the slides, so you can point rather than recite. Lines in *italics* are cues, not words to say.

The one idea to hold. Brands aren't in F1 for exposure. They're there to prove their technology under pressure, to be in the room with the right people, and to hit several goals with one partnership. Our job is to find Adyen the right fit. Today's ask is buy-in to F1 and to one central programme; the rights in the proposals are where the conversation starts, not where it ends.

Timing. About 30 minutes in full. For a 15-minute slot, use the key slides (marked ★) and give the others one line each. Slides 8, 12, 14 and 24 are hidden: skip them.

1 Opening

KEY SLIDE

Peter, thank you for the time.

Let me start with why we're here. As an agency, our role is to support you: to understand what Adyen needs, and to find the right fit in Formula 1. Not to sell you a package.

So what are brands actually in F1 for? It isn't exposure. The logo on the car is the least interesting part.

The best partners are there for two things. First, to show their technology working in real time, under pressure, in one of the most demanding operating environments in sport. Every race weekend is a live test, and the world is watching. Second, to be in the room with the right people: the decision-makers they want as clients, and the audience they want to reach.

And each brand is there for its own reasons. Some to recruit talent, some to grow the brand, some to build pipeline. F1 is one of the few places one partnership can do all of that at once.

Pause.

Commercial terms matter, and the teams have built their proposals around them. But I'd ask you not to judge this on the marketing rights today. They're the starting point for a conversation.

What matters more is how Adyen would use F1. You already host at races, market by market, each country on its own. Bring that into one programme and you get scale, one standard for how Adyen hosts, and one organisation acting together.

And it's scarce. Eleven teams, 22 drivers, 24 races. Each partner owns its category, so the brands around you in the paddock aren't competitors. They're people you can do business with.

That's why the teams are commercialising so hard. Under the budget cap they can't simply outspend each other on the car, so commercial growth is where they build value. McLaren is the clearest example: 57 partners, more than anyone on the grid, built on winning.

Cue: the budget cap is public F1 regulation, not from our data pack. Keep it general.

So that's the frame. Let me take you into the specifics.

---

2 Adyen's brief

KEY SLIDE

Everything today is measured against what your team told us.

Five priorities. Payment integration comes first: Adyen running inside a team's or rights holder's business, as a working product. Then a global brand, client relationships, and commercial growth: new deals, renewals, pipeline.

And look at the last one. One global programme, uniting local hosting across an initial eight to ten races. That's the central approach I just described, and it's already in your brief.

---

3 Competitive landscape

KEY SLIDE

Here's where your competitors are in sport.

Seven payment companies hold 32 properties between them. Each dot is one: a club, a league, a venue, an event. Football and the US leagues are crowded.

Now look at the green column. Only two of the 32 are in F1: Stripe with Mercedes, Airwallex with McLaren.

And the bottom row is Adyen today: payments partner to FC Bayern and Legia Warsaw, so football only, and nothing yet in F1.

That's the insight. F1 is the least crowded arena in sport for payments. The space Adyen would want is still open, and as I'll show you, it's not the space your competitors took.

---

4 Why F1, at a glance

KEY SLIDE

Six facts, and each one is a part of the story.

F1 is the number one sport, of the five we compared, on all five audiences Adyen sells to. It has 625 million followers, up 31% in four years. Half of the world's most valuable brands are involved. 457 million fans live in Adyen's own office markets. There are 24 race weekends to host at. And the eleven teams have 371 partners between them, with $6.7 trillion in combined revenue.

None of that is a transaction-volume number. That's the point: this is a commercial platform.

5 Executive summary: three routes

KEY SLIDE

So how does Adyen get in? Three routes, and two already have proposals on the table.

Max Verstappen: reach, influence, and a business Adyen can actually power. Ambassador from 2027 to 2030, Adyen running Verstappen Travel's tickets and trackside sales, and a hospitality programme built around the races you choose.

Alpine: the full team platform. Exclusive financial technology partner, Adyen powering the team's new online store, 56 Paddock Club tickets a year and 49 team partners to meet.

Ferrari: the one to keep in reserve. 42 partners, and more fans working in financial services than any other team. No proposal yet.

And the ask, at the bottom of the slide. Not a contract. Agreement that F1 is the right platform for Adyen. Then we start with one route, prove it, and grow from there.

6 The audience

KEY SLIDE

Let's test that against your buyers.

We compared five sports on five audiences that matter to Adyen. F1 wins all five. Two stand out: early tech adopters, 31% ahead of the next-best sport, and senior decision-makers, 12% ahead.

Go one level deeper, to fans who work in financial services. Every team's fans over-index, and Ferrari has the biggest pool: 1.8 million.

In plain terms: F1 fans are the people who sign enterprise contracts, and the consumers who adopt new ways to pay first. That's both sides of Adyen's business in one audience.

7 Footprint

KEY SLIDE

F1 goes where Adyen does business.

On the left, your 28 offices next to the 24 races, region by region. Every region with an Adyen office has a race, except India.

On the right, 457 million F1 fans live in your 22 office markets, up a third since 2022, and 13 of those markets host a race. India has 117 million fans and nearly doubled without a Grand Prix. Japan, a priority market for you, is up 41%.

9 Business leader network

KEY SLIDE

This is the slide that matters most for an enterprise business.

Half of the world's most valuable brands are involved in F1. The public brands in the F1 ecosystem have $10 trillion in combined revenue: more than the GDP of Germany, Japan, India, the UK or France.

On the right is who's in the room, including five of the Magnificent Seven. These are the companies Adyen wants as clients and partners, and F1 is where they spend time together.

10 Brand value

A quick word on why brand pays.

Kantar's portfolio of the strongest brands grew 504% between 2006 and 2026, against 451% for the S&P 500. Strong brands outperform.

And two examples close to your world: IBM and American Express both posted their biggest brand-value gains in the year they entered F1.

11 Hospitality

KEY SLIDE

This is the part of F1 that pays for itself.

Hospitality does three jobs, and each one maps to Adyen's P&L. It keeps clients: experiences ordinary hosting can't match. It builds pipeline: every race puts senior decision-makers in one place, with time to talk. And it brings in new merchants: the teams' 371 partners are all in the paddock.

And you don't have to take my word for it. *Say these verbally; the source decks are marked confidential, so they're not on screen.* Komatsu took more than $100 million in orders at races with Williams. HPE's CEO says race activations alone accelerated more than $300 million in revenue opportunity. And Businessolver, an Alpine partner, puts $122 million of pipeline down to hosting at the track.

13 Team partnership network

When you partner a team, its partners become people you can do business with.

At Alpine that's 49 partners with $390 billion in revenue, led by Boeing, Eni and Renault, and Gucci arrives as title partner in 2027. At Ferrari it's 42 partners and $568 billion, with Shell, IBM and HP at the top.

And McLaren, with the biggest network on the grid, shows you how hard the teams are selling.

15 Adyen wouldn't be following

KEY SLIDE

So are we asking you to follow your competitors in? No. Look at where they sit.

Stripe partners Mercedes. Airwallex runs McLaren's supplier payments, behind the scenes.

Adyen's seat would be different: the commerce fans actually see and use, live at the races. Alpine's team store. Verstappen Travel's tickets. Tap to Pay at Max's trackside trailers.

That's not following anyone. That's your technology working in real time, in front of fans and clients, which is exactly why brands are in F1.

16 How a payments peer uses F1

KEY SLIDE

Here's the playbook, from a company you know.

Step one, run the payments. McLaren was making around 30 manual international payments in every payment run, across 24 race locations, with two to five days to settle. Airwallex went live in 14 days.

Step two, prove it. 90% of payments now arrive within hours, 65% instantly.

Step three, use it to win clients. Airwallex turned the partnership into its enterprise showcase.

The playbook works. Adyen's version goes further, because it runs commerce fans can see.

17 We've done this before

KEY SLIDE

And we know that playbook, because we built it.

SPORTFIVE took Airwallex and McLaren from first idea to board decision. We diagnosed the gap, designed the case and the investment, and delivered the rights and the deal. That's the process we'd run with you.

18 Where Adyen sits in the business

KEY SLIDE

This is integration, in your own value chain: one platform from the fan to the business bank account.

Four steps. Power: Adyen runs the partner's payments, Alpine's store or Verstappen Travel's tickets. Prove: live data becomes a client case study. Host: hospitality at the centre. Connect: the partner's network becomes pipeline.

Integration first, not a logo deal. That's how we'd judge every route.

19 Three routes into F1

KEY SLIDE

Now the detail on each route.

Max and Alpine came out of conversations already under way, and both proposals are on the table for discussion. Max runs 2027 to 2030, at five to eight million euros a year depending on the rights. Alpine runs 2027 to 2029, at £10 million in 2027, rising 5% a year. Ferrari has no proposal yet.

The plan is at the bottom. Start with one route. Prove the payments work inside the partner's business. Then grow: more teams, more races, more markets.

20 Max Verstappen

KEY SLIDE

Route one: Max. More than a champion, a motorsport entrepreneur.

Four world titles, 71 wins, 19 million followers on Instagram, and the most popular driver on the grid according to Nielsen Sports. His biggest follower markets are the US, Brazil, the Netherlands, Mexico, the UK and Germany.

But here's what makes him different. Max has built a business: a shop, travel, GT3 racing, rally, sim racing, a pro simulation centre and an app. He's gone from competitor to entrepreneur, and that's exactly the kind of high-growth business Adyen exists to power. Two Dutch innovators.

21 Powering Verstappen.com

KEY SLIDE

So where does Adyen fit? I'll be straight with you.

The online store is out of reach: Fanatics runs it under an exclusive deal. The best fit is Verstappen Travel: Orange Army grandstand tickets, and the trailers selling merchandise at the track. Online booking, online payments and Tap to Pay, with real fans spending real money.

On the right are two mock-ups from Max's team: the official tickets shop and the Orange Army app, both powered by Adyen.

22 Rights package: Max Verstappen × Adyen

Highlights only. This is a first draft of what's possible; the next step is to tailor it to Adyen.

It runs 2027 to 2030. Max becomes an ambassador, with a full day of his time, three paddock meet-and-greets for VIP guests, a garage tour and a private track day. Branding across his helmets, race wear and GT3 car. And a hospitality programme built around Adyen's needs.

The fee range is five to eight million euros a year, depending on which rights Adyen takes.

23 Build a tailored hospitality package

KEY SLIDE

Max's package is light on F1 hospitality, so we'd build it in.

And here's the important part: this doesn't have to be new money. The idea is to bring together the hospitality budget Adyen already spends, race by race, into one tailored programme.

Max's package, plus race-weekend hospitality, off-track experiences and the logistics handled end to end. One programme to host Adyen's clients, merchants and prospects.

Framing: what follows are examples, not a quote. With your feedback, we build it bespoke.

25 Example race: Miami

Here's one race, to make it concrete: Miami.

Four ways to host. A private villa for 20 guests over three days, from $250,000. Two clubs, from $7,500 and $12,000 a person. And the one I'd point to for this route: the Red Bull Energy Station on race day, from $5,250 a person, with Q&As with Max Verstappen and Isack Hadjar.

If asked: starting prices; what's included varies race by race.

26 Example programme: Austin

And this is how a full programme comes together around one race. Four days in Austin.

Day one, arrival at the Commodore Perry Estate and dinner at Hestia. Day two, hat shaping, boot fitting, and horseback riding with former world champion Jenson Button. Day three is race day, from a private suite at Circuit of the Americas. Day four, home.

That's what turns a race ticket into a relationship.

27 Off track

A race weekend is three days, and the time off track matters as much as the race.

Friday, arrive and unwind. Saturday, explore the city. Sunday, race day and the after-party. These ideas come from our programmes at Austin, Singapore, Silverstone and Madrid, and we'd build Adyen's around the races you choose.

28 End-to-end hospitality

And we run all of it, so your teams don't have to.

Travel, as a licensed IATA agent. Hotels, from our own inventory. Guests, through a branded platform for invitations and itineraries. And local partners on the ground. Twenty years of doing this, for more than 30,000 guests a year.

29 Alpine KEY SLIDE

Route two: Alpine. And this is a team with real pedigree.

Enstone, Alpine's home, has produced seven world championships: Schumacher's titles with Benetton, Alonso's with Renault. Ayrton Senna started his career there.

Now it's entering a new era. From 2027 the team races as Gucci Racing Alpine. That tells you who is choosing to stand next to them.

And it's backed at the top. Renault Group's CEO says F1 is core to Alpine's strategy and that won't change. Pierre Gasly is signed to 2028 with nine million followers; Franco Colapinto brings seven million and Argentina with him.

The offer to Adyen: exclusive financial technology partner, 2027 to 2029, £10 million in 2027, with 56 Paddock Club tickets a year.

30 Alpine's fans

KEY SLIDE

Who would Adyen be talking to? Alpine's own numbers.

63.6 million fans. 26.8 million are decision-makers at work, and one in ten is C-suite. They're 276% more likely to be an executive purchaser than the average sports fan. And half are under 35.

On the right, the two groups that over-index most are executive purchasers, almost four times the average person, and cutting-edge consumers, three times. Enterprise buyers and early adopters of new tech. That's Adyen's customer list.

31 Alpine makes partnerships pay

KEY SLIDE

And Alpine knows how to make a partnership pay back.

On hosting: at the Alpine Lodge, 90% of guests say they're more likely to do business with their host, and 93% leave understanding the host's business better. That's pipeline.

On campaigns: Eni got 9.8 million impressions from one home race at Imola. Xbox got six million from a single weekend. A content series with Mercado Libre and Colapinto reached 23 million impressions. And their STEM programme with Microsoft reached students in 99 countries.

That's the machine Adyen would plug into.

32 How Adyen would work with Alpine

Alpine's plan for Adyen follows the same four steps we've talked about.

Integrate: Adyen powers the team's new online store, with fan rewards on top. Prove: films and features on the integration, and a live lab at Enstone for your customers. Experience: a race-week showcase with an Adyen customer in a Grand Prix city. Convert: a C-level club at the races, and a forum with Alpine's partners.

It covers all five of your priorities in one package.

33 Alpine rights overview

Highlights only. Branding on the engine cover and halo. Time with the drivers and senior team. Content and case studies. And a strong hospitality and experiences programme: 56 Paddock Club tickets, Enstone factory tours, a driving day, and introductions to Alpine's partners. The full list is there for reference.

34 Scuderia Ferrari

Route three, briefly: Ferrari.

42 partners with $568 billion in revenue, Shell, IBM and HP at the top, and six partners worth more than $200 billion each. It also has the largest pool of fans working in financial services, 1.8 million.

No proposal yet. Whether we open that conversation is one of the next steps.

35 Next steps

KEY SLIDE

Six steps from here.

It starts with your review of the Max and Alpine proposals, the week of 9 November. Then your feedback, including on the hospitality programme. We refine the rights, decide whether to open a conversation with Ferrari, then the contract and integration plan, and launch.

Pause. Then the ask:

So Peter, the question I'd leave you with isn't "which contract". It's this: is F1 the right platform for Adyen? If the answer is yes, we'll come back with the right route and the right deal to get you in.

36 Sources and notes

Keep this slide for the room. Every number in the deck traces back to a source listed here.

Questions Peter might ask, and how to answer

"What's the transaction volume? Is it worth it on payments alone?"
Be honest: payment volume is real, but it isn't the headline. Brands are in F1 to prove their technology under pressure, meet the right people and hit several goals with one partnership. Point to slides 4 and 11.

"Aren't we just following Stripe and Airwallex?"

No. They're in different seats. Stripe partners Mercedes; Airwallex runs McLaren's supplier payments behind the scenes. Adyen's seat is the commerce fans see, live at the races (slides 3 and 15).

"Why not Mercedes or McLaren?"

Mercedes has Stripe and McLaren has Airwallex, both direct competitors (slide 3).

"What exactly do we get for the money?"

The rights are on slides 22 and 33, and they're where the conversation starts. First, is F1 the right platform? Then we shape the rights around how Adyen wants to use it.

"We already do hospitality at races. Why change?"

Because today it's market by market. One programme gives you scale and one standard, it can bring together budget you already spend, and it's what your own brief asks for: one global programme across an initial eight to ten races (slide 2).

"Max, Alpine or Ferrari?"

They do different jobs. Max brings reach, influence and a business Adyen can power, with hospitality built in, at €5–8M a year depending on rights. Alpine is the full team platform: exclusive category, the team's online store, 56 Paddock Club tickets, 49 partners and a fanbase full of executive buyers, at £10M in 2027. Ferrari has the most fans in financial services but no proposal yet. The decision today is F1 itself.

"Is Alpine competitive enough?"

Enstone has won seven world championships, Renault Group has committed to F1 as core strategy, and Gucci is putting its name on the team from 2027. Partners are buying into the platform and the audience, not one season's results.

"What would hospitality cost?"

It depends on the races and the format. At Miami, packages start at $5,250 a person and go up to $250,000 for a private villa for 20 guests (slide 25). We'd price a programme once we know the races and guest numbers.

"Why are teams so keen to sign partners?"

Teams run as businesses now. Under the budget cap, commercial growth is where they build value. McLaren has the most partners on the grid: 57.

"How do we measure it?"

Pipeline sourced, deals accelerated, priority accounts retained and grown, payment volume processed, and case studies published.

"Are these numbers forecasts?"

No. They're results from named sources: partners already in F1, the rights holders' proposals and presentations, and SPORTFIVE's partner data.
